SUMMARY

Final-year Computer Science undergraduate (2027 batch) with a full-stack and applied AI/ML background — React, TypeScript, Python, FastAPI, and LLM-driven systems. Have independently shipped complete products end-to-end, from architecture through deployment, across 7+ projects of varying scale, including two major, production-grade builds. Also leads the college's DSA Club, mentoring juniors in Data Structures & Algorithms. Comfortable across the full development lifecycle — design, implementation, testing, and debugging — and enjoys working in a team as much as building solo.

EDUCATION

Atal Bihari Vajpayee Government Institute of Engineering and Technology, Shimla, HP 2023 – 2027

Bachelor of Technology, Computer Science and Engineering | CGPA: 7.79 / 10.0

Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Machine Learning

Senior Secondary (Class XII) — PCM (Physics, Chemistry, Mathematics) 2023

Scored 81.3%. Built a foundational base in analytical thinking and problem-solving through the PCM curriculum, along with early communication and teamwork skills from school-level activities.

EXPERIENCE

AI Virtual Intern, AI Track — Infosys Springboard 7.0 (Remote) Jul 2026 – Present

- Completed the AI/ML track curriculum covering supervised and unsupervised machine learning, deep learning, NLP, and computer vision, after clearing an online technical assessment (final project deployment and certification in progress).
- Trained and evaluated a machine learning model end-to-end on a real dataset, applying feature engineering, model selection, and standard evaluation metrics.

LEADERSHIP & MENTORING

Lead, DSA Club — College Chapter Ongoing

- Lead the college's DSA Club, running regular sessions to teach juniors Data Structures & Algorithms in C++ — from array/string fundamentals through recursion and trees — combining strong programming knowledge with hands-on mentoring, communication, and teamwork.

MAJOR PROJECTS

Idea-to-Blueprint Pipeline — AI Software Engineering Tool [\[GitHub\]](#) May 2026 – Jun 2026

React 18, TypeScript, FastAPI, Python 3.12, Pydantic v2, Supabase, Google Gemini API

- Built a full-stack platform that turns a one-line product idea into a structured 9-section engineering blueprint (scope, architecture, data model, APIs, and more) through a multi-stage LLM pipeline, where each stage validates and refines the previous stage's output before passing it forward.
- Designed the FastAPI backend with Pydantic v2 for schema validation between pipeline stages, and Supabase for persistence, so partial blueprints are never lost mid-generation.
- Implemented an export and sharing subsystem with real-time status tracking, backed by an automated test suite, so users can watch a blueprint generate and download it once complete.

Agentic AI for Smart Facility Operations & Optimization [\[GitHub\]](#) Jul 2026 – Sep 2026

Python, FastAPI, React, scikit-learn, Groq/Gemini LLM APIs, SQL — 3-member team project

- Co-developed a 5-agent facility-management platform (Energy, Maintenance, Occupancy, Security, Cost Optimization) using Python and FastAPI, owning the system architecture, the ML forecasting pipeline, and the Agentic AI tool-calling layer.
- Built multi-horizon ML forecasting and predictive-maintenance models trained on real NASA C-MAPSS and UCI datasets, validated with time-series cross-validation against naive baselines.
- Implemented an Agentic AI layer enabling multi-step, tool-calling decisions via LLM (Groq/Gemini) function-calling — for example, reading a sensor forecast and deciding whether to raise a maintenance ticket — covered by a 59/59-passing automated test suite.

OTHER PROJECTS

Alongside the two major builds above, have completed 5+ additional small-to-medium projects built specifically to strengthen individual skills — spanning frontend UI work, backend APIs, and applied ML experiments. Full list and code available on GitHub and the portfolio site linked above.

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL, JavaScript, TypeScript

AI/ML: LLM Pipeline Design (Google Gemini, Groq LLaMA 3.3), Agentic AI Tool-Calling Systems, Prompt Engineering, Feature Engineering, Model Evaluation

Full Stack Development: React, TypeScript, FastAPI, Node.js, REST API Design & Integration

Core Computer Science: Data Structures & Algorithms, Object-Oriented Design, Complexity Analysis, SDLC fundamentals, Unit Testing

Databases & Infrastructure: PostgreSQL, SQLite, Supabase, SQLAlchemy, Git, GitHub, Linux, Vercel, Render

Soft Skills: Communication, Teamwork, Mentoring, Analytical Thinking, Problem-Solving

CERTIFICATIONS

- Oracle Agentic AI Certified Foundations Associate — Oracle (2026)
- Oracle Cloud Infrastructure (OCI) 2025 Certified Generative AI Professional — Oracle (2025)
- Responsive Web Design — freeCodeCamp
- Scientific Computing with Python — freeCodeCamp
- Python 3 — IIT Bombay
- C++ Programming — IIT Bombay
